

Electrical Safety Tests

Medical Supermarket works with PHS Compliance to test each of the electrical circuits on site to ensure optimum safety.

Key Points:

- Isolation of each circuit is necessary, this usually takes around 20 minutes per circuit
- The whole buildings electrical circuits will also need to be isolated so do bear this in mind when requesting a booking date

About PHS Compliance:

PHS Compliance helps over 6,000 organisations across the UK and Northern Europe achieve compliance with stringent government legislation. Our products and services ensure that clients protect their staff, customers, visitors, property and possessions with best assurance against the dangers associated with electricity, gas and power. Organisations that choose PHS to deliver their compliance services, do so because of their tireless endeavors to deliver the very best in technical expertise, support, customer service and value for money – all of which has your very best assurance of quality control with our unique accreditation to UKAS.

All of their compliance services are delivered in the strictest accordance with the following legislation for your peace of mind:

- The Health and Safety at Work Act etc 1974
- BS 7671:2008 Incorporating Amendment No 2: 2013
- The Electricity at Work Regulations (Northern Ireland) 1991
- National Rules for Electrical Installations
- BS5839 Regulations for Fire Detection and Fire Alarms
- BS5266 Emergency Lighting Regulations
- The Gas Safety (Installation and Use) 1998

For a quote just let us know how many circuits you have on site!
